

Hearn and Nolan Construction Grow Greener

**Keith Burnham, Director of Preconstruction,
Now a LEED Accredited Professional**

Keith Burnham, Director of Preconstruction for Hearn Construction and Nolan Construction, has passed the examination to be designated LEED AP (Leadership in Energy and Environmental Design Accredited Professional). According to the United States Green Building Council (USGBC), "LEED Accredited Professionals have demonstrated a thorough understanding of green building techniques, the LEED Green Building Rating System, and the certification process." This certification qualifies Keith, who held an architect license in Missouri for 15 years before becoming a construction project manager, to help plan and document green projects in order to have them LEED certified by the USGBC.

Hearn Construction, already a member of the USGBC, is working to prepare staff for green building requirements now becoming commonplace in the construction market. As more government agencies and consumer groups demand environmentally sound building practices and healthy buildings for residents and workers, pressure increases on the building industry to provide design and execution that meet these criteria. Architects, engineers, and contractors are training and certifying employees to help meet these goals. "We are prepared to meet the challenges of the future and want to continue to be responsible for the communities we work in," says Fred Hearn, CEO/President.
